Beta Lactamase Test Strip Kit

β -Lactamase Strips are test strips for the rapid acidimetric detection of the β -lactamase activity of microorganisms. The test is based on hydrolysis of the β -lactam ring in benzylpenicillin, which results in the production of penicilloic acid. This process causes acidification of the bacterial suspension,...

Hardy Diagnostics Beta-Lactamase Test is a means of detecting the enzyme beta-lactamase, which confers penicillin resistance to various bacterial organisms by cleaving the beta-lactam ring of penicillins and cephalosporin antibiotics. A wide variety of bacteria produce this enzyme, including both gram-positive and gram-negative organisms.

Beta-lactamases are enzymes produced by bacteria that provide multi-resistance to β -lactam antibiotics such as penicillins, cephalosporins, cephamycins, and carbapenems, although carbapenems are relatively resistant to beta-lactamase. Beta-lactamase provides antibiotic resistance by breaking the antibiotics' structure. These antibiotics all have a common element in their molecular structure: a four-atom ring known as
