attachment shall be used as the connection point for fall arrest systems. This article outlines a logical safety justification for using the sternal (chest) attachment on specific harnesses for some fall arrest applications.

Sternal Attachment for Fall Arrest

Thank you for the information, Sternal depression is the inward bending of the breast bone which is present in front of chest. This is often present since birth. Usually it does not need any treatment if it is not affecting the activity of other organs like that of heart or lungs. When it is minor you need not to be worried.

What does minor lower sternal depression mean

pectus excavatum a congenital malformation of the chest wall characterized by a funnel-shaped depression with its apex over the lower end of the sternum; it is caused by shortening of the central portion of the diaphragm, which pulls the sternum
